SERVICES PRESENTATION

Who, where, how, when, why

Scenario

A Company processes are standardized, aiming at a repetitive production of products and services. The nature of the Project can be distinguished on the base of the different time horizon, which is no longer static but dynamic. Consequently, the projects realization requires different attitudes and the development of suitable methods and approaches for their management. An inadequate management of project activities involves losses and, anyway, additional costs that are due to:

- Not properly trained or not expert personnel for the specific activity;
- Poor organization and schedule;
- Materials and services not in line with what required by the Client.

Solution

The solutions offered by **Limber WHEELER**, the **Limber** GROUP division with ad hoc services for the Projects Management, allow improving the safety in your projects results.

Our Services

The Projects Management allows combining the warranty of project delivery, a complete reference guide, governance tools and best practice examples. We have developed and perfected state of the art systems, procedures/specifications for the management/control/support of engineering, procurement, construction, including the start-up of industrial processes and plants, in the respect of health, safety, environment and sustainability. We promote a common approach in the project management and execution to rationalize time/resources, to zero losses and project additional costs as answer to new markets and most demanding companies' needs.

Substantial advantages and benefits of project management

Limber WHEELER operates in this field with multi-segment services of Projects Management, developed mainly on the Customer's specific needs.

- **Exploration:** recognition and elimination of critical deviations in the initial phase;
- **Support:** support in the fulfillment of your obligations regarding customer's needs and construction/start-up deadlines. Support in the collection of payments at the pre-established deadlines. Accurate and timely identification of potential threats and problems to prevent delivery delays and penalties;
- **Prevention:** minimization/reset of delivery delays and consequent penalties, prevention of long lasting invested capital stock, ensuring reliability and integrity to the Client;
- **Planning:** support in the project planning and management with warranty of progress timeliness;
- **Assistance:** support to zero contract penalties, compensation requests or budget overruns;
- **Competence:** analysis technique and organization design;
- **Experience:** twenty years of meaningful experience in international projects;
- **Customized services:** multi-services portfolio and industrial know-how to provide you innovative solutions to answer to each of your needs along the whole supply chain.

Our Method

Our Standard is able to adapt to different situations through the study of specific customized qualification plans, built on the Customer evaluation model. We can arrange check-lists for the control of project status, schedule and costs, traceability tests. The introduced Corrective Actions will be progressively evaluated to check the adequacy to the expectations. A successful Project is characterized by the constant presence, in each of its phases, of three main activities: Planning, Programming and Control. The Customer's representatives are needed to provide an interface, technical knowledge of the company systems and are the direct contact with each project activity.

Activities Procedure

Please refer to the Specific Service file.

Collected and issued documents

Each week, during the Weekly and Monthly Meetings the Project progress will be documented and the Engineering documents updated. At the end of the Project, a book containing all the Engineering documents will be issued as set in the contract terms.

Value added services for the project management

The Projects Management Services are an important support for the start-up, planning, production, testing, delivery and installation, internal or outsourced, phases. Thanks to a continue exchange of experiences, our professionals have a high level of expertise. In this way, we can implement your results with Efficiency and Safety, performing Project Review, according to the program set, international specifications, directives and standards in force. We supervise activities in each part of the world, ensuring the respect of contract provisions; in addition, we offer the supervision and monitoring service of all the on-site activities during construction, assembly and start-up.

The **LIMBER** GROUP **modular approach** allows customizable solutions able to cover alla the possible issues connected to the Client company processes and products. We are ready to provide you the best support, reminding that our **Technical/Commercial support 24H/7 service** is able to evaluate every request of offer and technical details within the following 4h.
